

4D Scanning

now available at
Adelaide Women's Imaging

4D ultrasound scans capture moving (4D) and still images (3D and 2D) of your beautiful baby's features such as their little face, hands and feet. The service is provided at 26-32 weeks of your pregnancy and is available to patients who have had their Nuchal Translucency and Morphology Ultrasound Scans with Dr Jones & Partners or Adelaide Women's Imaging.

We invite your family and friends along to share in this unique and special bonding experience with you. Imagine the excitement as you try and see whose features the baby has. Limited spaces are available, so making a dedicated appointment is essential.

All 4D scans are performed by AWI Accredited Sonographers, giving you the peace of mind that your baby is in skilled hands.

4D Package
\$150

Package Includes:

- DVD footage of the scan
- CD with a minimum of 10 images
- Images are displayed in realtime via large screen projection
- 10 glossy photos of your baby
- Photo Album displaying your photos
- All photos will be prepared and printed on the day of scan and ready for you to take home
